CLARIO MEDICAL IMAGING RECEIVES FDA CLEARANCE FOR z3D CONTRAST ACUITY VERSION 2.1

SEATTLE, WA (September 5, 2008) – Clario Medical Imaging announced today that it has received 510(k) clearance from the FDA for their *z3D Contrast Acuity* software (*z3D*). *z3D* will be distributed to customers through a license agreement with Invivo Corporation.

z3D is a post processing, morphology visualization software package designed to assist radiologists in the interpretation of dynamic studies including breast MR.

“Clario is excited to have received clearance to market a new version of *z3D* which has been enhanced through the use of the Blink technology we licensed in 2007,” said Chris Wood, President and CEO, Clario Medical Imaging. “We are excited to be offering this through Invivo on the DynaCAD system.”

About Clario Medical Imaging

Clario Medical Imaging, Inc. develops software products that use the power of computer graphics to display images in unique ways. This new method of display is more closely matched to the human visual system than a conventional presentation, increasing the efficiency of the radiologist. As a positive side effect, pilot studies have demonstrated a significant increase in radiologist efficiency when compared to conventional reading techniques. Clario Medical Imaging is bringing new post-processing technologies to radiologists by embedding them into existing reading stations and through our new platform, *zVision*.
