

## Replace Your PACS or Just Your Worklist?

This question does not get asked frequently enough. Hospitals and private practices should not resign themselves to replacing their PACS before looking at alternatives. If you ask the right questions, you may find that you do not need to endure the frustration and expense of PACS replacement, including data translation and export/import; retraining of radiologists/staff; hardware/software costs; and downtime.

## What Can Be Accomplished by Simply Replacing the Worklist

The table below illustrates some of the functionality that can be obtained without purchasing a new PACS. We recommend looking at Clario's zVision™ system before spending many times more for a system that may not be needed.

Functionality	Need a new PACS?
Fast access to the right exams, prior reports and amazingly fast workflow	N
Integrated critical test report management and peer review	N
Practice statistics	N
Better communication with ED docs and referring physicians	N
More exams to read because of a new hospital client (with an existing PACS)	N
Image viewer does not support a clinical application I need (which is available from third party)	N
PACS does not integrate well with RIS/EMR or other applications	N

## Clario PACS Worklist Upgrade Program

Ask Clario about the PACS worklist upgrade program. Move your practice forward quickly and efficiently. Clario can even host your worklist in the cloud, reducing your hardware expense to zero.

In addition to saving money and making your group more efficient today, Clario's zVision™ positions you for whatever tomorrow brings. Utilizing a vendor-neutral, integrated single worklist will allow you to make whatever 'Best in Class' system decisions the future requires, without the total disruption to your workflow that so often accompanies growth.
