Clario's New Plugin Allows Radiologists to Dictate Reports Using Zero Footprint Voice Recognition

*Newest Addition to Product Line Improves Operating Efficiencies, Physician Productivity and Overall Quality of Patient Care*

SEATTLE, WA — Clario's new workflow plugin integrates Nuance's secure cloud-based clinical speech recognition technology, providing customers with a zero footprint voice recognition solution. By speech-enabling [Clario's Enterprise Worklist](#), customers can further improve operating efficiencies, increase physician productivity and satisfaction, and raise the overall quality of patient care.

"With voice-enabled web browsers and cloud-based voice to text, radiologists can now dictate directly into the Clario Enterprise Worklist," said Chris Wood, CEO, Clario. "We believe that this will truly expand radiologists' ability to read exams from any workstation, allowing for greater practice productivity."

Nuance's cloud-based platform offers fast, accurate and secure documentation with automatic updates to the latest medical dictionary, phrases, and clinical formatting rules. Clario's plugin provides built-in voice commands to streamline dictation, navigation, and text corrections of your radiology reports and notes.

Clario's customers can reap the productivity and financial benefits of a secure, industry-leading medical speech recognition platform all from within the Clario Enterprise Worklist. With a speaker-adaptive engine that allows users to talk naturally and at their own pace, built-in visualization and feedback, voice navigation and correction capabilities, and anytime, anywhere access, you can rest assured that clinical information is accurate and up to date.

#### **About Clario**

**Clario partners with hospitals, imaging centers and private practice radiology groups to improve radiologists' efficiency through system integration. For more information, email [sales@clariomedical.com](mailto:sales@clariomedical.com), or call 206-357-7884 to schedule a demo.**
